This project has been developed under the valuable guidance and supervision of Er. Ved Prakash Sir. His guidance, support, and valuable suggestions helped us throughout the development of this project.

INTRODUCTION

JalMitra is a water supply management system that connects customers, suppliers, and administrators on one platform. It makes water ordering and supply management simple, convenient, and organized. Customers can order water, suppliers can manage their products and orders, and admins can manage the overall system efficiently.

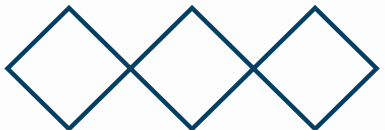

TECHNOLOGIES USED

FRONTEND

- 1.HTML5
- 2.CSS3
- 3.JavaScript
- 4.React.js
- 5.Tools:Git & GitHub / VSCode

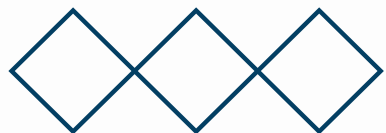

BACKEND

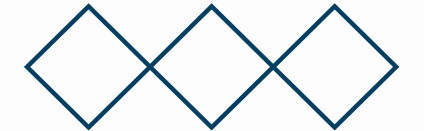

- 1.Node.js
 - 2.Express.js
 3. MongoDB
 - 4.REST API / Fetch API
 5. JWT
- 

OBJECTIVES

JalMitra aims to simplify the process of ordering water by connecting customers with nearby water suppliers through an easy-to-use platform.

- Easy and convenient water ordering
- Connect customers with nearby suppliers
- Display water and supplier details clearly
- Enable online order placement
- Help suppliers manage orders
- Provide an admin panel
- Mobile-friendly and responsive design

KEY MODULES OF JALMITRA

- Customer Module
- Supplier Module
- Admin Module
- Product Management
- Order Management

PROJECT GOALS

Easy Water Ordering :- Make the process of finding and ordering water simple and convenient.

Efficient Supply Management:- Help suppliers manage water products, prices, capacity and orders efficiently.

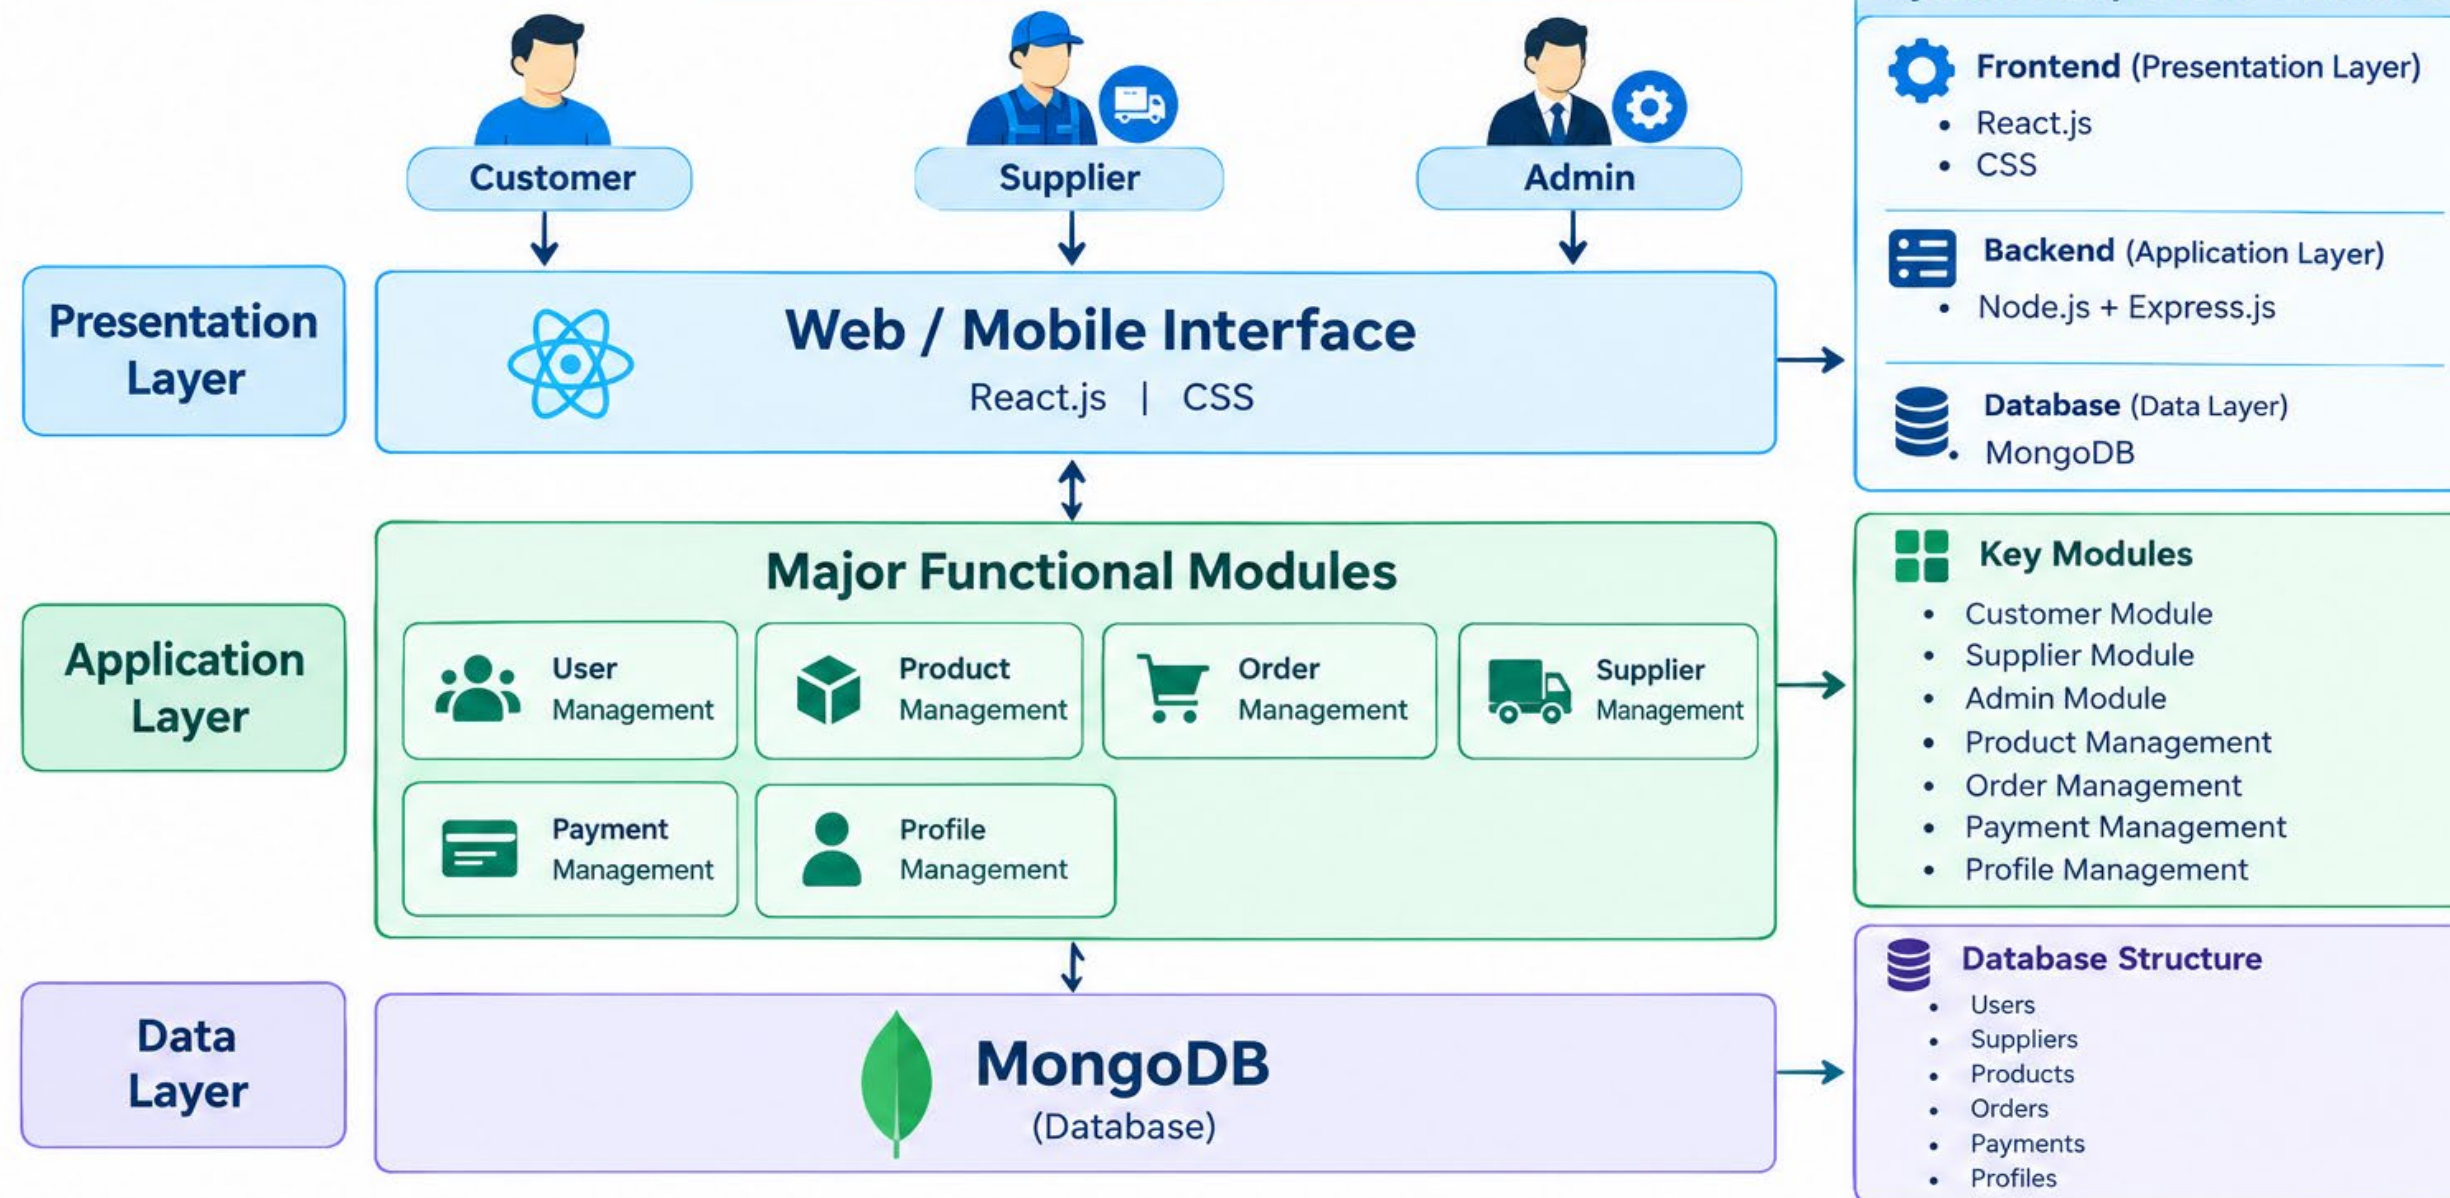

Better User Experience:- Provide a simple and user-friendly platform for customers, suppliers and admins.

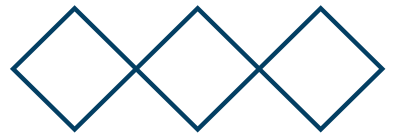

Water Supply Management System

High-Level Design (HLD) Diagram

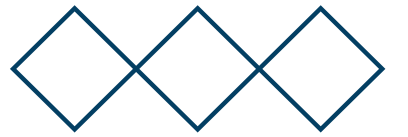

PROBLEMS IN THE EXISTING SYSTEM

- Water suppliers are difficult to find nearby.
- Customers have limited information about available water products and prices.
- Ordering water through traditional methods can be
- time-consuming.
- Suppliers may face difficulty managing products and customer orders.
- There is no centralized system for managing customers, suppliers, and orders.
- Order tracking and delivery management can be difficult.

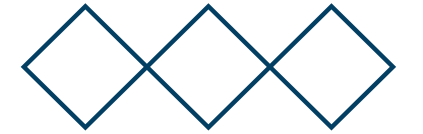

PROPOSED SOLUTION

- JalMitra provides a digital platform to solve common water supply problems and make the process simple, convenient, and efficient.
- Easily find nearby water suppliers.
- Get information about water type, price, and capacity.
- Place water orders online.
- Manage products and orders through the supplier dashboard.
- Track order status and delivery.
- Connect customers, suppliers, and administrators on a single platform.

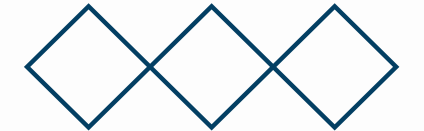

BENEFITS OF JALMITRA

- **Easy Water Ordering** :— Customers can order water conveniently online.
- **Nearby Supplier Search** :— Helps customers find water suppliers in their area.
- **Time Saving** – Reduces the need for manual ordering and communication.
- **Easy Product Management**: – Suppliers can easily manage water products and prices.
- **Order Tracking**: – Customers can check their order status and delivery progress.
- **Centralized Management** : – Customers, suppliers, and admins can manage their activities through one platform.

CONCLUSION

JalMitra provides a simple and efficient digital solution for managing water supply services. It connects customers, suppliers, and administrators on a single platform, making water ordering, product management, and order tracking easier. The system aims to improve convenience, transparency, and efficiency in the water supply process.
